

Amendments to the Specification:

Please replace the Abstract with the following amended Abstract:

- 5 A self positioning astragal seal that automatically positions at least one seal at the lower end of an astragal adjacent the threshold sill of a door frame, and prevents drafts at the vicinity of the lower end of the astragal and the threshold sill, and/or of automatically positions at least one seal at the upper end of the astragal adjacent the header of the door frame, and prevent drafts at the vicinity of the header. The self positioning astragal seal
- 10 independently positions itself abuttingly adjacent the sill and/or the header when the astragal's bolts are extended from a retracted position to an extended position and are received by the upper and/or lower apertures in the upper and/or lower portions of the door frame, is easy to use, install, and can be used with a variety of astragals and threshold sills, types, sizes, and shapes of threshold sills, doors, and door frames.
